By the end, you will leave with three things.

01

A working agent

Named, with custom instructions and at least one knowledge file. Built by you. Ready to use Monday.

02

Preferences set

Configured once, applied to every Copilot conversation forever. The single highest-leverage 5 minutes of today.

03

A new mindset

Stop writing prompts. State your goal, let the agent interview you. The shift from craft to conversation.

What you were taught vs what actually works.

Old paradigm • 2024 thinking

Write the perfect prompt

You lead, AI executes

The skill is in the prompt

Frustrating to learn

Necessary for 100-user agents

New paradigm • day-to-day reality

State your goal, let the agent ask

AI leads, you answer

The skill is in noticing drift

Natural, like talking to a smart intern

Overkill for one customer email

THE THESIS

Forget prompt engineering.

State your goal. State your task.
Then let the agent *interview you*.

Prompt engineering is end-game craft. For 95% of your Tuesday morning, you don't need it.

THE NEW CRAFT

CONTEXT ENGINEERING.

Not the prompt. The context around it.

YOU

Persoonlijke voorkeuren

THE AGENT

Custom Instructions

THE SOURCE

Knowledge files

THE FLOW

The conversation itself

Goal + Task + Open Questions invitation.

Three ingredients. The agent does the rest.

GOAL

The why

Context that doesn't change between prompts.

EXAMPLE

"I'm preparing a stakeholder update for Channels leadership on Q3 sales."

TASK

The what

The specific deliverable today.

EXAMPLE

"I need a 3-slide deck outline."

OPEN Q's

The invitation

Tell the agent to interview you.

EXAMPLE

"Before you start, ask me the 5 most important questions you need answered to make this excellent."

Set once. Applied to every Copilot conversation forever.

Your role

"Channels manager at ING Consumer NL"

Work context

"Tribe-based delivery, daily M365 user, 4-person squad"

Tone preferences

"Direct, scannable, NL+EN bilingual, banking jargon ok"

Format preferences

"Bullets over prose, numbered lists, max 200 words"

Constraints

"No corporate fluff. No 'as an AI...'. Always cite my files."

5 min
today.

Years of payoff.

Copilot Settings > Personal Preferences > fill in, save, done.

Who do you talk to?

Same shape for every agent you build. Fill the four boxes, get a working colleague.

01 Role

Who the agent is.
“You are Bram, the brief-builder for ING Channels.”

02 Style

How it speaks.
Tone, length, bullets vs prose, language.

03 Rules

What it always does and never does.
E.g. always cite sources, never invent customer data.

04 Behaviour

Does it ask questions first?
“Before producing anything, ask me 3 clarifying questions.”

Personal preferences vs Custom Instructions.

Personal preferences

Applies to EVERY Copilot interaction

About you as a person

"I am Wouter, I prefer bullets"

Set in Settings

Custom instructions

Applies to ONE specific agent

About the agent's specific job

"You are Bram the brief-builder. Always ask 3 questions first."

Set in Agent Builder

Personal preferences is about you. Custom Instructions is about the colleague you're hiring.

Seven features that make the difference.

Slash references

OneDrive & SharePoint

Work vs Web

Toggle, top of chat

App-to-app handoff

Teams → Outlook → Word

Pages

Collaborative editable docs

Voice input

+ WisprFlow as a stretch

Schedule Prompts

Run weekly, auto-write

Deep Research

Multi-step, cited reports

Type / and pull any file into the chat.

Files, people, meetings. The fastest way to ground Copilot in your work.

- Works in OneDrive and SharePoint.
- Does NOT work for Orangesharing or The Forge.
- That's a roadmap issue, not a Copilot bug.
- Pair with /meeting recaps for instant follow-up drafts.

LIVE DEMO

"Summarise /Q3-tribe-update.pptx for me."

Teams meeting to follow-up email in 90 seconds.

TEAMS

Open a recent meeting with transcription on.

COPILOT

"Summarise this meeting and draft a follow-up email to all attendees."

OUTLOOK

Copilot writes the email in Outlook. You review, edit, send.

90 seconds

for what used to take 15 minutes.

Stop copying Copilot output to Word.

Pages turns chat output into a collaborative document that keeps adapting.

- One click: 'Open this in Pages'.
- Edit inline. Copilot keeps refining alongside.
- Share a link with the squad. Co-edit in real time.
- End of the copy-paste-to-Word cycle.

LIVE DEMO

"Open this draft in Pages and add a section on Q3 risks."

Talk. Copilot listens.

The fastest input method most people never try.

- Microphone icon in Copilot Chat.
- Dictate the goal + task + open vragen out loud.
- Copilot transcribes and executes.
- Stretch tool: WisprFlow dictates 3x faster than typing.
- WisprFlow is a separate productivity stack add-on.

LIVE DEMO

Try it: dictate your next email draft instead of typing it.

A prompt that runs itself, every Monday.

Tribe rituals automated. Outputs land in Pages while you sleep.

- "Every Monday 08:00, summarise last week's customer feedback emails."
- Combine with Pages: outputs auto-write into a living doc.
- Use cases: daily team brief, weekly trend monitor, monthly tribe report.
- Set the schedule once, retire the recurring chore.

LIVE DEMO

*Demo: set up a Monday-morning
Channels brief in 60 seconds.*

Multi-step research, with citations.

Microsoft's pre-built Deep Researcher agent. The closest thing to hiring a junior analyst.

- "Build me a competitive analysis on [X] with citations."
- Multi-step web research, structured report back.
- Slow: minutes, not seconds. Plan for the wait.
- Pro move: kick it off before a break, return to the result with the room.

LIVE DEMO

Today: trigger one before the 11:00 break. We read it together after.

One named agent. Ready to use.
... or 3+

30 MIN

1 Pick a task

20+ min, weekly, that you'd teach a junior.

2 Name with alliteration

Bram the Brief-builder. Lara the Lead-qualifier.

3 New agent

Copilot Chat → New agent.

4 Custom Instructions

Role · Tone · Rules · Opening behavior.

5 Knowledge files / folders

1 to 6 items from OneDrive or SharePoint.

6 Test, fail, iterate

Three test prompts. Fix where it breaks.

Hard stop at minute 30: agents in their current shape are good enough. Stop polishing, start using.

Smarter together. The tribe's second brain.

WHY SHARE

What works for you

probably works for your tribe.

Avoid duplicate work

don't hire the same specialist twice.

Beat shadow IT

agents in the open are safer than agents in the dark.

Compound learning

a tribe of curious users is your fastest path.

WHAT LIVES THERE

P

Prompts

that produced real outputs

A

Agents

Custom Instruction (templates) to clone

K

Knowledge

context files, links, references, SOP's, best practices

E

Examples

concrete outputs worth copying

Share your agents. The room that shares fastest, learns fastest.

A SharePoint structure that actually gets used.

OPERATING RULES

01 Pin as a Teams tab

One click from the tribe channel. If it isn't pinned, it doesn't exist.

02 One owner, many contributors

Assign a curator per tribe. Without an owner, the library rots.

03 Review monthly

15 minutes in stand-up: what's new, what to retire.

Swap 'Channels' for your tribe name. Ship it Monday.

Three habits to keep the momentum.

01

Share successes

When a prompt or agent works well, drop it in the AI-bibliotheek on Teams.

Prompts that worked · Custom Instructions to copy · Concrete output examples

02

Monthly AI-moment

15 minutes in the tribe stand-up. One question:

"What did you discover this month?"

03

Experiment & have fun

Not everything works first try. The best discoveries come from trying.

Pin the AI-bibliotheek as a tab in Teams. Make it easy to add to.

What you take home today.

- ✓ What Copilot is and where to find it.
- ✓ The new pattern: Doel + Taak + Open vragen.
- ✓ Personal preferences set, Custom Instructions understood.
- ✓ Seven Copilot features that integrate across your work.
- ✓ How to build, name, and live with an AI-collega.

One sentence each, round the room:

"My agent is called [name]. It does [task]. The next thing I'll try is [thing]."

AND ONE LAST THING

You came in with a prompt.
You leave with a colleague.

MONDAY they're at work before you are.

FRIDAY you hire the second one.

Plain English in. Insight out.

Stop wrestling with VLOOKUP. Ask Copilot what you actually want to know.

Q3-tribe-sales.xlsx — Excel

fx

=COPILOT("What's the trend in Q3 vs Q2?")

Week	Visits	Leads	CVR	Trend
W27	8.2k	412	5.0%	▲
W28	9.1k	468	5.1%	▲
W29	8.9k	503	5.6%	▲
W30	9.4k	489	5.2%	▼
W31	10.1k	612	6.1%	▲

- 1

Ask in English
Formulas, no syntax.
- 2

Charts & PivotTables
One-prompt visuals.
- 3

Summarise the sheet
Trends, outliers, gaps.
- 4

Clean messy data
Split, dedupe, reformat.
- 5

Next-step suggestions
What to look at next.

TRY THIS NEXT

Open any Excel file and ask Copilot: “What’s the most interesting thing in this data?”

A prompt that runs itself.

Saved, scheduled, shared. Recurring chores become Monday-morning outputs.

Scheduled prompts — this week

MON	TUE	WED	THU	FRI
08:00 Status summary		10:00 Customer feedback		
				17:00 Weekly digest

Set once · runs forever · lands in Pages.

- 1

Save once
One-click reuse, no retyping.
- 2

Schedule it
Daily, weekly, monthly.
- 3

Share with the team
Same prompt, same output.
- 4

Chain with context
Files, meetings, mailboxes.
- 5

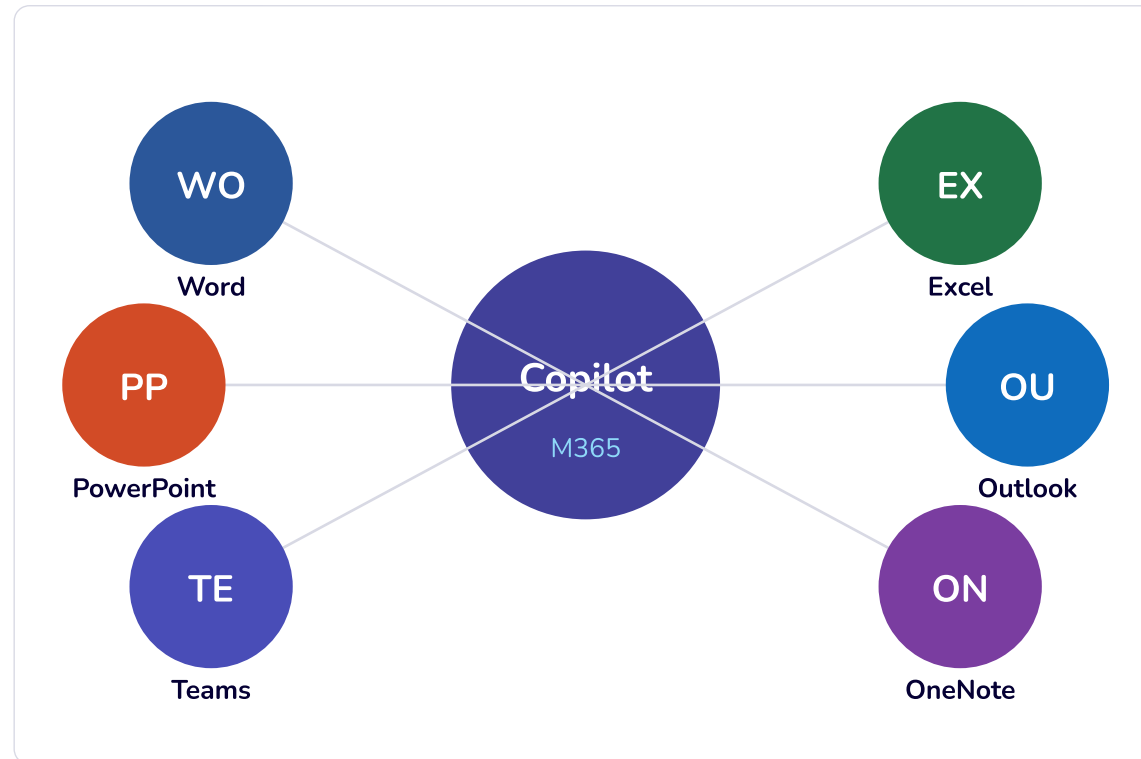

Great for
Reports, digests, meeting prep.

TRY THIS NEXT

Open Copilot › Prompts › New planned prompt and schedule one for Monday 08:00.

One Copilot. Every app.

Same patterns inside Word, Excel, PowerPoint, Outlook, Teams and OneNote.

- 1 Stay in-app**
Draft, rewrite, summarise.
- 2 Cross-app context**
Teams chat → Word doc.
- 3 One sign-in**
Tenant data, enterprise-grade.
- 4 Learn once**
Use across the suite.
- 5 Tab · click · ask**
Three keystrokes, always.

TRY THIS NEXT

In any M365 app, hit the Copilot icon and ask: “Summarise this for me.”

Find anything. In plain English.

No Boolean operators. No advanced filters. Just the question you would ask a colleague.

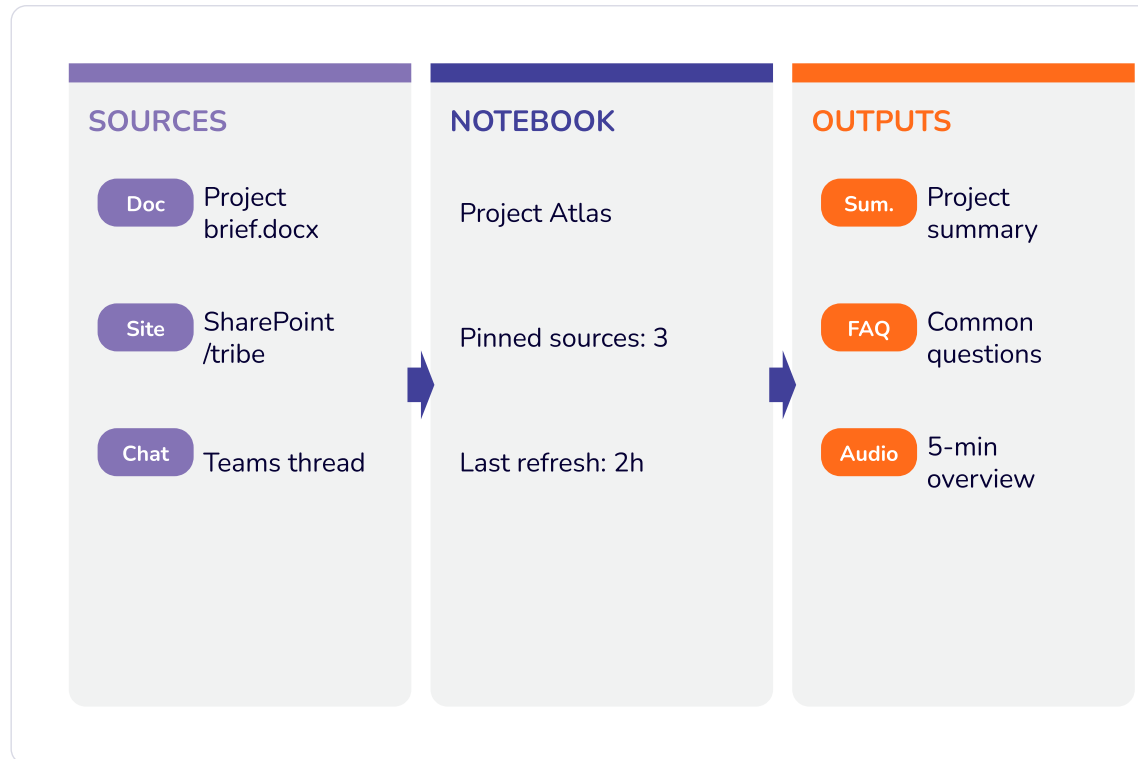

- 1 Plain-English queries**
No syntax to memorise.
- 2 Searches everything**
Mail, attachments, invites, notes.
- 3 Filters that just work**
Sender, date, project, topic.
- 4 Thread summarising**
What actually needs a reply.
- 5 Drafts a reply too**
Grounded in the history.

TRY THIS NEXT

Open Outlook, hit the Copilot icon and try: “What did I miss while I was on holiday?”

Grounded answers, on your sources only.

Pin the documents, sites and chats that matter. Copilot answers from those, and only those.

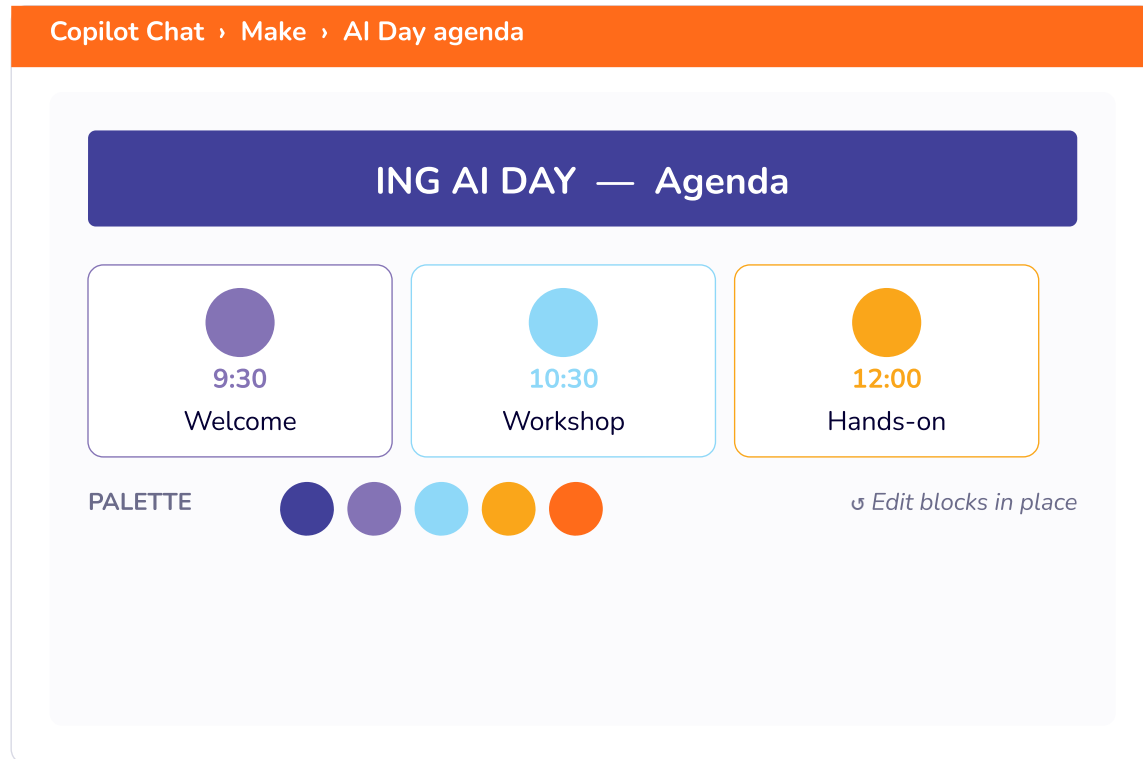

- 1 Pin your sources**
Docs, sites, Teams chats.
- 2 Focused answers**
Only your canon, fully cited.
- 3 Made for projects**
Deal teams, audits, recurring topics.
- 4 Summary, FAQ, audio**
Three views of one source set.
- 5 Share the notebook**
Same grounded Copilot for all.

TRY THIS NEXT

Build a Notebook for your current project and ask: “What changed since last week?”

Infographics without the designer.

Describe the story. Copilot drafts the visual. Edit blocks in place.

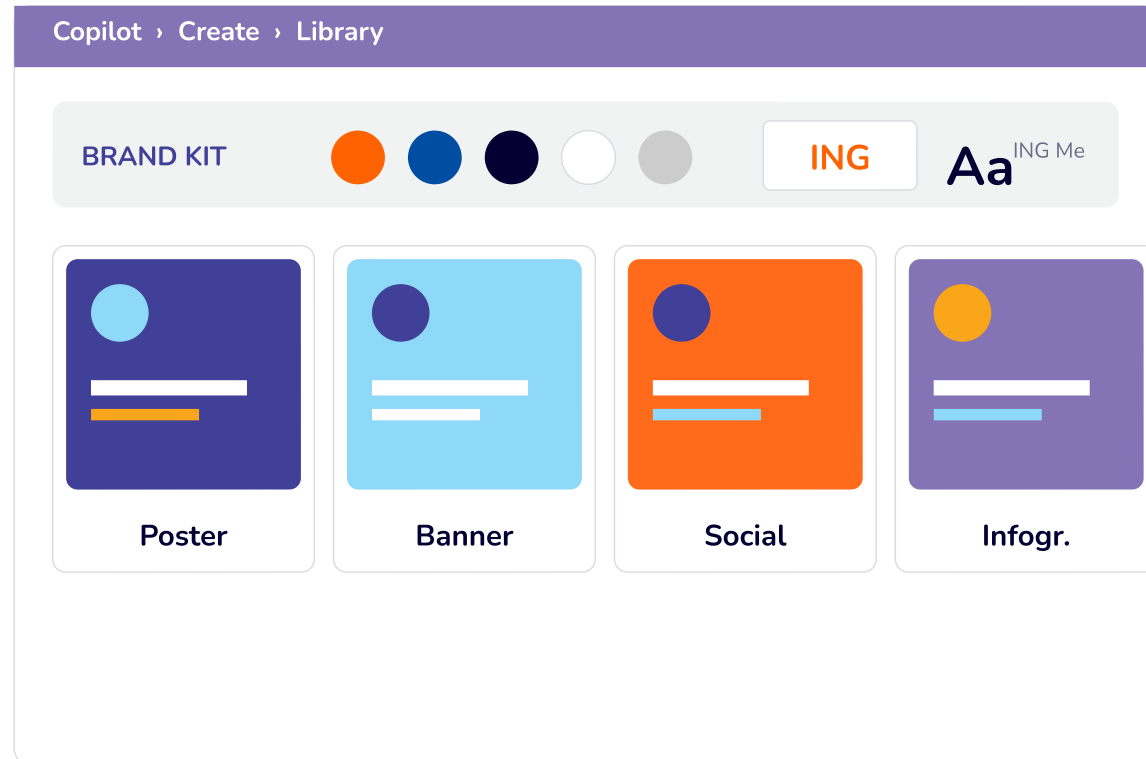

- 1 Describe the story**
Copilot drafts in seconds.
- 2 Edit blocks in place**
Titles, icons, order, palette.
- 3 Export anywhere**
PNG, PowerPoint, Word.
- 4 Great for**
Explainers, process maps, one-pagers.
- 5 Stop asking design**
Ship the v1 yourself.

TRY THIS NEXT

Open Copilot Chat → Make and prompt: “Infographic of our AI Day agenda.”

Your in-Copilot visual studio.

Images, posters, banners, infographics — with your brand kit baked in.

- 1 Generate visuals**
From a single prompt.
- 2 Your brand kit**
Logos, colours, fonts applied.
- 3 Branded templates**
PowerPoint, Word, Excel ready.
- 4 Edit & restyle**
Drop into Designer or your deck.
- 5 Lands in Library**
Reuse across the team.

TRY THIS NEXT

“Create an infographic about our AI Day agenda using our ING brand kit.”
